Then, based on the five essential characteristics of urban  
agglomerations, we build an index system for the  
classification of urban agglomerations that consists of 10  
factors and 22 indicators, and a Q-type cluster analysis is  
employed to quantitatively group five kinds of the urban  
agglomerations: mature export- oriented type, dual- core  
catch- up type, environment-friendly type, single nuclear  
radiation type, and inland extensive type. Only in  
administrative center cities, can border cities with large  
scale built-up areas be observed, such as Kunming - the  
provincial capital of Yunnan, Hu Zhiming city - the capital of  
Vietnam.
